

# ABSTRACT

A heat-curable fluoropolyether rubber composition  
5 comprising (A) 100 pbw of a straight-chain perfluoropolyether  
compound having at least two alkenyl groups in a molecule,  
(B) 1-100 pbw of a reinforcing filler, and (C) 0.1-5 pbw of  
an organic peroxide is freed from cure inhibition by catalyst  
poisons, and its cured rubber has improved properties  
10 including heat resistance, chemical resistance, solvent  
resistance, parting property, water repellency, oil  
repellency and low-temperature properties.
